

## The Graze-Tek™ Complete Advantage

*Optimizing Plant Performance Potential*

### Improved Establishment, Root Development & Early Stand Resilience

Graze-Tek is a premium forage seed coating platform designed to help forage crops germinate faster, develop stronger early root systems, and improve establishment. Every Graze-Tek product is built on our upgraded, high-quality durable coating, which reduces dust-off, improves flowability, and protects seed integrity during handling, transport, and planting.

Graze-Tek Complete combines a biological foundation with a targeted biostimulant package to deliver maximum early-season performance from a single coating. By placing beneficial microbes and physiological support compounds directly on the seed, Graze-Tek Complete enhances early nutrient uptake, strengthens root-zone function, and improves seedling resilience during the most critical stages of establishment.

### Primary Agronomic Benefits

#### Improved Germination and Early Vigor

Promotes faster, more uniform emergence, and stronger early seedling growth, supporting consistent stand development.

#### Enhanced Root-Zone Function

Builds a more active microbial environment around developing roots, increasing nutrient availability and stimulating deeper, more effective root-system development.

#### Increased Early Biomass and Dry-Matter Production

Supports greater early-season growth and dry-matter accumulation by improving early nutrient access and early plant performance, contributing to improved forage yield potential.
