

# GRAZE-TEK™ COMPLETE

Premium Forage Coating for Stronger Roots and Better Establishment

**Graze-Tek™ Complete** is a premium forage seed coating combining biologicals and biostimulants in a high-durability coating designed to maximize early root development, stand establishment, and early-season forage production.

- **Biologicals** support early root-zone activity and nutrient availability
- **Biostimulants** enhance early growth and stress tolerance
- **High-durability coating** reduces dust and improves seed protection

## Active Ingredients

Calcium carbonate

Bacillus amyloliquefaciens

Trichoderma atroviride

Chitosan (plant defense elicitor)

## Agronomic Performance

**Graze-Tek™ Complete** enhances early root development and root-zone activity, allowing forage seedlings to access moisture and nutrients sooner. Stronger early roots improve establishment speed, stand density, and early-season growth, setting the foundation for higher long-term productivity.

### Graze-Tek™ Complete vs. Raw

Forage Tall Fescue Trials

10% increase in lbs/ac of dry production over 3 cuttings

9% increase in emergence 10 days after planting

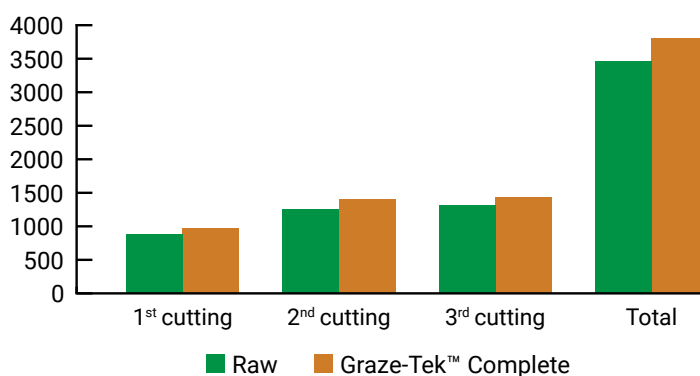

3% more plants per square foot at 1<sup>st</sup> cutting

### Performance benefits include:

- Improved Germination and Early Vigor
- Enhanced Root-Zone Function
- Increased Early Biomass and Dry-Matter Production

### Graze-Tek™ Complete vs. Raw Cuttings

Forage Tall Fescue Trials (lbs DM/acre)

## Storage & Handling

Store coated seed in a cool, dry environment. Avoid prolonged exposure to excess moisture or heat prior to planting.
