

## Turfgrass Seed Coating Platform

### Giving Turf A Better Start

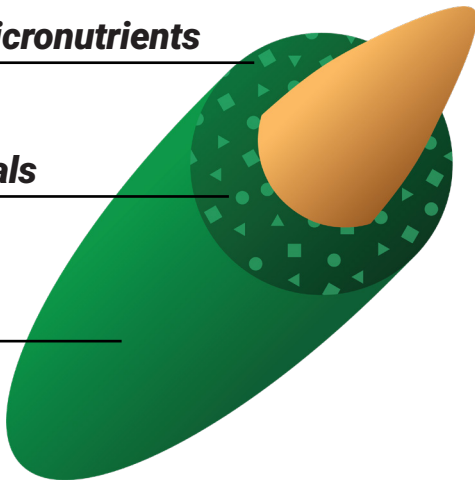

Green-Tek™ is part of the Tek™ Coating Platform, a family of performance-driven seed coating products engineered for turf, forage, and cover crops. The Tek™ Coating Platform is a solution-based approach that combines advanced adhesive technology with targeted biologicals, micronutrients, and premium additives to help seed perform better from the start.

Created specifically for turf, Green-Tek™ products are built to deliver cleaner handling, consistent performance, and stronger starts. The Green-Tek™ turfgrass seed coating platform consists of four specialized coatings: Green-Tek™ Base, Green-Tek™ Bio, Green-Tek™ Micro and Green-Tek™ Complete. These coatings are specifically designed to accelerate establishment and deliver stronger, more uniform early growth.

**Micronutrients**

**Biologicals**

**Base**

#### **BASE**

**Durable turfgrass coating that is designed for clean handling and dependable planting performance.**

Each of our Green-Tek™ products is built upon the Green-Tek™ Base coating. Green-Tek™ Base adds the benefits of reduced dust-off and optimized soil pH.

#### **BIO**

**Broad-spectrum microbial coating that supports early root development and nutrient use.**

Green-Tek™ Bio takes this a step further by adding a broad-spectrum microbial. The biologicals of this coating will enhance early root development and maximize nutrient uptake.

#### **MICRO**

**Micronutrient-driven coating that jump-starts germination and early vigor.**

Green-Tek™ Micro focuses on enhancing vigor and germination by utilizing micronutrients within the coating. Micronutrients are crucial for early plant growth, particularly for root development.

#### **COMPLETE**

**All-in-one biological + micronutrient system for maximum early performance.**

Green-Tek™ Complete combines essential micronutrients and beneficial microbials in a single, all-in-one coating. By placing these performance components directly on the seed, Green-Tek™ Complete improves germination, enhances early root and shoot development, and maximizes nutrient uptake during the most critical stages of turf establishment.

**Give your turf a better start.**
