

SEED COATING INSIGHTS

GRAZE-TEK™

Where a pasture's success begins

April 2026

BUILDING BETTER PASTURE FROM THE GROUND UP

What does it take to build an ideal pasture? Successful grazing starts long before livestock steps into the field. Healthy soil, adapted seed genetics, strong establishment, and reliable precipitation are all part of the equation; but can the seed itself bring any added benefits to the table? At Smith Seed Services we know everything begins with how the formula is designed.

Introducing Graze-Tek™, a custom seed coating platform designed to help growers establish high-performing pastures specifically for livestock production. Graze-Tek™ delivers a comprehensive blend of targeted microbes, carefully selected bio stimulants, and functional additives designed to support early establishment for pasture grass.

INSIDE GRAZE-TEK™ COATING

Forage grasses and broadleaf crops are very susceptible to pests and disease due to their tender, nutrient-rich profiles. Every minute spent on improving pasture establishment matters. Graze-Tek™ is built onto every seed to jumpstart growth from day one, delivering faster emergence, stronger roots, and more resilient seedlings.

SMITH SEED SERVICES COATING RESEARCH

Graze-Tek™ can be customized to specific forage species, soil conditions, and production goals. Whether establishing new pasture or reseeding existing acres, Graze-Tek™ is designed to help growers build productive, resilient grazing systems. Graze-Tek™ helps set the foundation for healthier pastures and more reliable grazing performance season after season.

Turn Around Time: Week of 04/20/2026 is approximately 10 business days.
