Seed Coated with
AquaTEKsc™

The AquaTEKsc™ Advantage

We know how important it is to get your seeds off to the best possible start. Designed specifically for grasses, legumes, and other seeds, AquaTEKsc™ offers superior water absorption and retention, leading to better seed germination and more successful plant establishment.

Why AquaTEKsc™ Works

AquaTEKsc™ is a water-absorbing technology that helps maintain a capsule of moisture around each seed throughout the germination process. This unique technology helps seeds absorb and retain water more effectively, reducing seedling mortality and leading to healthier, more resilient plants.

Key Features of AquaTEKsc™

- **Twice the Water Retention:** AquaTEKsc™ retains moisture for over twice as long as both our standard-coated seed and raw seed, reducing the risk of the seed drying out before they are established.
- **63% More Water Absorption:** Compared to our standard seed coatings, AquaTEKsc™ absorbs 63% more water, ensuring that each seed has ample moisture during critical early growth stages.

Please reach out if you would like our current coating price list.

Turn Around Time: Week of 2/10/2025 is around 9 business days.
