

SEED COATING INSIGHTS

SPRING MOMENTUM, SUMMER AHEAD

MAY 2026

▶ **CONSISTENT PERFORMANCE THROUGH EVERY SEASON**

As we head into the summer coating window, we want to thank all of our customers and partners for their continued trust and support. This spring brought its share of challenges, but it also highlighted the importance of reliable performance and responsive customer service.

▶ **PLANNING AHEAD FOR SUMMER DEMAND**

Our team is continuing to process fast orders and reorders as planting windows shift and late-season needs arise. If you anticipate additional coating requirements, now is the time to reach out so we can help secure scheduling and turnaround times before summer demand increases.

▶ **POSITIONED FOR WARM- SEASON PLANTING**

Our Lamar, MO location is well-positioned to coat warm season grasses and cover crops. Ask how our Green Tek and Graze Tek packages can enhance turf and forage performance.

PRODUCTION CAPACITY AVAILABLE

With additional production capacity currently available, we are continuing to accept additional coating volume as we move into the summer season. Our team remains ready to support fast-turn orders, reorders, custom projects, and new coating programs across a wide range of seed types and applications.

Turn Around Time: Week of 05/25/2026 is approximately 10 business days.
